Back End Software Engineer

Vast is a platform that informs confident decisions in complex and high-risk environments, powered by large datasets and surfaced by artificial intelligence (AI), for automotive and real estate enterprise clients and consumers alike. Collecting and analyzing data since its founding in 2005, Vast has become the premier provider of Big Data solutions for many of the largest Global 1000 businesses, like Chase, Capital One and HSBC.

As a Backend Software Engineer you'll join our Engineering team, in charge of Vast's Big Data Platform and large scale API Services that run on our cloud infrastructure.

We are looking for:
• BSc / MS graduated or final year students in Computer Science
• Passionate learner with interest in algorithms, data structures and software design
• Experience with JVM stack

Bonus skills:
• Experience with cloud-based development in AWS
• Experience in development on Unix/Linux platforms
• You like clean code
• Capable of expressing yourself in a way your audience understands
• Taking responsibility for others, helping them and guiding them if necessary

Some of the benefits of working at Vast include:
• Competitive compensation
• Working with a top-notch technical team spread across Serbia and the U.S.
• Opportunities to acquire new technical skills and work with the latest technologies

Your development skills are valued more than the length of your professional experience. If you are interested in joining our team, please send your resume and a cover letter to career@vast.com.
