Strawberry Support & Quality Control Engineer

The Role
Strawberry is looking for a Support & Quallity control Eletrical Engineer to support the development, implementation and application of a wide variety of hardware and software components in our core technology. In this role you will have a broad scope of responsibility from sourcing components, testing and configuring electronical and networking equipment, to remote support and troubleshooting it with our partners across the world.

Responsibilities:
Ensuring quallity control throughout our electronics and networking hardware
Sourcing hardware components according to technical specifications
Creating and assembly of our electronics hardware
Conducting quallity control tests to validate both hardware and software
Configuring networking equipment hardware and software
Online technical and engineering support and troubleshooting of our hardware and software
Validate hardware systems, integrate, deploy and maintain hardware systems on the production line.

Requirements
2 years + of experience in an relevant engineering development environment
Ability to work independently, think creatively and produce "outside of the box" solutions
Strong experience with reading, interpreting, and drawing electrical schematics and circuits.
Strong experience with wiring diagrams and harness drawings.
Experience with sourcing electronical components
Experience with networking equipment (Routers, MikroTik equipment, etc)
Experience with oscilloscopes, power supplies, and similar lab equipment.
Remain engaged, proactive and positive in tough circumstances, owning assignments and taking full accountability for their success.
Positive attitude, eagerness to learn and ability to change direction quickly.
